NAME

cefsconv − convert a TeX document in SJIS encoding containing CEF macros into 'preprocessed' form.

SYNOPSIS

cefsconv < *infile* > *outfile*

DESCRIPTION

The **Chinese Encoding Framework** (**CEF**) developed by Christian Wittern <`cwittern@con-line.central.de`> makes it possible to include CJK characters in various encodings using the SGML macros **&CX-aabb;** for Big 5 and CNS encoding and **&U-aabb;** for Unicode (**X** denotes a number between 0 and 7; 0 represents Big 5 encoding, 1-7 CNS encoding planes 1-7. **aabb** is either a decimal or hexadecimal number).

cefsconv converts the CEF macros of a SJIS encoded document together with the SJIS encoding itself into a form which can directly processed with $\text{\LaTeX} 2_\varepsilon$. It is identical to

sjisconv < *infile* | **cefconv** > *outfile*

This filter is part of the **CJK** macro package for $\text{\LaTeX} 2_\varepsilon$.
