Contents

1	Linear Algebra	27
1.1	L2 Norm	27
1.2	Inner Product Spaces and Gradient Derivative	30
1.2.1	Real inner product spaces	30
1.2.2	Class instances	35
1.2.3	Gradient derivative	38
1.3	Cartesian Products as Vector Spaces	39
1.3.1	Product is a Module	40
1.3.2	Product is a Real Vector Space	40
1.3.3	Product is a Metric Space	41
1.3.4	Product is a Complete Metric Space	52
1.3.5	Product is a Normed Vector Space	52
1.3.6	Product is Finite Dimensional	56
1.4	Finite-Dimensional Inner Product Spaces	58
1.4.1	Interlude: Some properties of real sets	58
1.4.2	Type class of Euclidean spaces	58
1.4.3	Subclass relationships	62
1.4.4	Class instances	63
1.4.5	Locale instances	65
1.5	Elementary Linear Algebra on Euclidean Spaces	67
1.5.1	More interesting properties of the norm	68
1.5.2	Substandard Basis	69
1.5.3	Orthogonality	70
1.5.4	Orthogonality of a transformation	71
1.5.5	Bilinear functions	73
1.5.6	Adjoint	74
1.5.7	Euclidean Spaces as Typeclass	75
1.5.8	Linearity and Bilinearity continued	75
1.5.9	We continue	79
1.5.10	Infinity norm	83
1.5.11	Collinearity	87
1.5.12	Properties of special hyperplanes	90
1.5.13	Orthogonal bases and Gram-Schmidt process	92

1.5.14	Decomposing a vector into parts in orthogonal subspaces	94
1.5.15	Linear functions are (uniformly) continuous on any set	100
1.5.16	Topological properties of linear functions	100
1.6	Affine Sets	101
1.6.1	Affine set and affine hull	103
1.6.2	Affine Dependence	113
1.6.3	Some Properties of Affine Dependent Sets	117
1.6.4	Affine Dimension of a Set	121
1.7	Convex Sets and Functions	130
1.7.1	Convex Sets	130
1.7.2	Explicit expressions for convexity in terms of arbitrary sums	133
1.7.3	Convex Functions on a Set	136
1.7.4	Arithmetic operations on sets preserve convexity	141
1.7.5	Convexity of real functions	150
1.7.6	Some inequalities: Applications of convexity	154
1.7.7	Misc related lemmas	155
1.7.8	Cones	156
1.7.9	Connectedness of convex sets	158
1.7.10	Convex hull	159
1.7.11	Relations among closure notions and corresponding hulls	169
1.7.12	Caratheodory's theorem	169
1.7.13	Some Properties of subset of standard basis	172
1.7.14	Moving and scaling convex hulls	172
1.7.15	Convexity of cone hulls	173
1.8	Conic sets and conic hull	174
1.9	Convex cones and corresponding hulls	178
1.9.1	Radon's theorem	181
1.9.2	Helly's theorem	183
1.9.3	Epigraphs of convex functions	185
1.9.4	A bound within a convex hull	186
1.10	Definition of Finite Cartesian Product Type	188
1.10.1	Finite Cartesian products, with indexing and lambdas	188
1.10.2	Cardinality of vectors	189
1.10.3	Group operations and class instances	191
1.10.4	Basic componentwise operations on vectors	192
1.10.5	Real vector space	194
1.10.6	Topological space	194
1.10.7	Metric space	196
1.10.8	Normed vector space	199
1.10.9	Inner product space	200
1.10.10	Euclidean space	201
1.10.11	A naive proof procedure to lift really trivial arithmetic stuff from the basis of the vector space	203

1.10.12	Some frequently useful arithmetic lemmas over vectors	205
1.10.13	Matrix operations	207
1.10.14	Inverse matrices (not necessarily square)	212
1.11	Linear Algebra on Finite Cartesian Products	214
1.11.1	Type (a, n) <i>vec</i> and fields as vector spaces	214
1.11.2	Some interesting theorems and interpretations	222
1.11.3	Rank of a matrix	223
1.11.4	Lemmas for working on $real^{1/2/3/4}$	226
1.11.5	The collapse of the general concepts to dimension one	227
1.11.6	Routine results connecting the types $(real, 1)$ <i>vec</i> and <i>real</i>	228
1.11.7	Explicit vector construction from lists	228
1.11.8	lambda skolemization on cartesian products	229
1.11.9	Explicit formulas for low dimensions	231
1.11.10	Orthogonality of a matrix	231
1.11.11	Finding an Orthogonal Matrix	233
1.11.12	Scaling and isometry	235
1.11.13	Induction on matrix row operations	236
1.12	Traces and Determinants of Square Matrices	241
1.12.1	Trace	242
1.12.2	Relation to invertibility	257
1.12.3	Cramer's rule	260
1.12.4	Rotation, reflection, rotoinversion	263
1.13	Operators involving abstract topology	265
1.13.1	General notion of a topology as a value	266
1.13.2	The discrete topology	269
1.13.3	Subspace topology	270
1.13.4	The canonical topology from the underlying type class	274
1.13.5	Basic "localization" results are handy for connectedness.	275
1.13.6	Derived set (set of limit points)	278
1.13.7	Closure with respect to a topological space	281
1.13.8	Frontier with respect to topological space	289
1.13.9	Locally finite collections	294
1.13.10	Continuous maps	297
1.13.11	Open and closed maps (not a priori assumed continuous)	304
1.13.12	Quotient maps	313
1.13.13	Separated Sets	321
1.13.14	Homeomorphisms	324
1.13.15	Relation of homeomorphism between topological spaces	332
1.13.16	Connected topological spaces	333
1.13.17	Compact sets	343
1.13.18	Embedding maps	352
1.13.19	Retraction and section maps	354
1.13.20	Continuity	356

1.13.21	Half-global and completely global cases	357
1.13.22	The topology generated by some (open) subsets	361
1.13.23	Topology bases and sub-bases	363
1.13.24	Continuity via bases/subbases, hence upper and lower semicontinuity	366
1.13.25	Pullback topology	370
1.13.26	Proper maps (not a priori assumed continuous)	372
1.13.27	Perfect maps (proper, continuous and surjective)	377
1.14	F -Sigma and G -Delta sets in a Topological Space	379
1.15	Disjoint sum of arbitrarily many spaces	384
2	Topology	389
2.1	Elementary Topology	389
2.1.1	Topological Basis	390
2.1.2	Countable Basis	392
2.1.3	Polish spaces	400
2.1.4	Limit Points	401
2.1.5	Interior of a Set	406
2.1.6	Closure of a Set	410
2.1.7	Frontier (also known as boundary)	412
2.1.8	Filters and the “eventually true” quantifier	414
2.1.9	Limits	414
2.1.10	Compactness	417
2.1.11	Cartesian products	429
2.1.12	Continuity	432
2.1.13	Homeomorphisms	434
2.1.14	On Linorder Topologies	438
2.1.15	nhdsin and atin	440
2.1.16	Limits in a topological space	442
2.1.17	Pointwise continuity in topological spaces	445
2.1.18	Combining theorems for continuous functions into the reals	445
2.2	Non-Denumerability of the Continuum	448
2.2.1	Abstract	448
2.3	Abstract Topology 2	452
2.3.1	Closure	455
2.3.2	Frontier	456
2.3.3	Compactness	456
2.3.4	Continuity	457
2.3.5	Equality of continuous functions on closure and related results	457
2.3.6	A function constant on a set	458
2.3.7	Continuity relative to a union.	459

2.3.8	Inverse function property for open/closed maps	460
2.3.9	Seperability	462
2.3.10	Closed Maps	463
2.3.11	Open Maps	463
2.3.12	Quotient maps	464
2.3.13	Pasting lemmas for functions, for of casewise definitions	466
2.3.14	Retractions	470
2.3.15	Retractions on a topological space	475
2.3.16	Paths and path-connectedness	478
2.3.17	Connected components	481
2.3.18	Combining theorems for continuous functions into the reals	487
2.3.19	A few cardinality results	488
2.4	Connected Components	493
2.4.1	Connectedness	493
2.4.2	Connected components, considered as a connectedness relation or a set	494
2.4.3	The set of connected components of a set	498
2.4.4	Proving a function is constant on a connected set by proving that a level set is open	502
2.4.5	Preservation of Connectedness	502
2.4.6	Lemmas about components	504
2.4.7	Constancy of a function from a connected set into a finite, disconnected or discrete set	507
2.5	Function Topology	508
2.5.1	The product topology	509
2.5.2	The Alexander subbase theorem	526
2.5.3	Open Pi-sets in the product topology	534
2.5.4	Relationship with connected spaces, paths, etc.	537
2.5.5	Projections from a function topology to a component	542
2.5.6	Limits	543
2.6	The binary product topology	544
2.7	Product Topology	545
2.7.1	Definition	545
2.7.2	Continuity	549
2.7.3	Homeomorphic maps	556
2.8	T1 and Hausdorff spaces	561
2.9	T1 spaces with equivalences to many naturally "nice" properties.	561
2.9.1	Hausdorff Spaces	566
2.10	Lindelöf spaces	578
3	Functional Analysis	585
3.1	A decision procedure for metric spaces	585

4 Elementary Metric Spaces	589
4.1 Open and closed balls	589
4.2 Limit Points	595
4.3 Perfect Metric Spaces	596
4.4 Finite and discrete	597
4.5 Interior	598
4.6 Frontier	598
4.7 Limits	598
4.8 Continuity	601
4.9 Closure and Limit Characterization	603
4.10 Boundedness	605
4.11 Compactness	607
4.12 Banach fixed point theorem	612
4.13 Edelstein fixed point theorem	615
4.14 The diameter of a set	616
4.15 Metric spaces with the Heine-Borel property	620
4.16 Completeness	623
4.17 Cauchy continuity	628
4.18 Finite intersection property	630
4.19 Properties of Balls and Spheres	631
4.20 Distance from a Set	631
4.21 Infimum Distance	632
4.22 Separation between Points and Sets	637
4.23 Uniform Continuity	638
4.24 Continuity on a Compact Domain Implies Uniform Continuity	640
4.25 Theorems relating continuity and uniform continuity to closures	642
4.26 With Abstract Topology (TODO: move and remove dependency?)	647
4.27 Closed Nest	648
4.28 Making a continuous function avoid some value in a neighbourhood	650
4.29 Consequences for Real Numbers	651
4.30 The infimum of the distance between two sets	654
4.31 Diameter Lemma	658
4.32 Elementary Normed Vector Spaces	659
4.32.1 Orthogonal Transformation of Balls	660
4.32.2 Various Lemmas Combining Imports	660
4.32.3 Support	661
4.32.4 Intervals	662
4.32.5 Limit Points	663
4.32.6 Balls and Spheres in Normed Spaces	665
4.32.7 Various Lemmas on Normed Algebras	668
4.32.8 Filters	669
4.32.9 Trivial Limits	669

4.32.10	Limits	670
4.32.11	Limit Point of Filter	672
4.32.12	Boundedness	673
4.32.13	Relations among convergence and absolute convergence for power series	676
4.32.14	Normed spaces with the Heine-Borel property	677
4.32.15	Intersecting chains of compact sets and the Baire property	677
4.32.16	Continuity	681
4.32.17	Arithmetic Preserves Topological Properties	683
4.32.18	Homeomorphisms	691
4.32.19	Discrete	693
4.32.20	Completeness of "Isometry" (up to constant bounds) . .	693
4.32.21	Connected Normed Spaces	695
4.33	Linear Decision Procedure for Normed Spaces	697
5	Vector Analysis	701
5.1	Elementary Topology in Euclidean Space	701
5.1.1	Continuity of the representation WRT an orthogonal basis	701
5.1.2	Balls in Euclidean Space	703
5.1.3	Boxes	707
5.1.4	General Intervals	721
5.1.5	Bounded Projections	724
5.1.6	Structural rules for pointwise continuity	725
5.1.7	Structural rules for setwise continuity	725
5.1.8	Openness of halfspaces.	725
5.1.9	Closure and Interior of halfspaces and hyperplanes . . .	726
5.1.10	Some more convenient intermediate-value theorem for- mulations	728
5.1.11	Limit Component Bounds	729
5.1.12	Class Instances	734
5.1.13	Compact Boxes	736
5.1.14	Componentwise limits and continuity	737
5.1.15	Continuous Extension	739
5.1.16	Separability	741
5.1.17	Diameter	743
5.1.18	Relating linear images to open/closed/interior/closure/con- nected	744
5.1.19	"Isometry" (up to constant bounds) of Injective Linear Map	746
5.1.20	Some properties of a canonical subspace	750
5.1.21	Set Distance	751
5.2	Line Segment	754

5.2.1	Topological Properties of Convex Sets, Metric Spaces and Functions	754
5.2.2	Midpoint	757
5.2.3	Open and closed segments	758
5.2.4	Betweenness	773
5.3	Convex Sets and Functions on (Normed) Euclidean Spaces . . .	777
5.3.1	Topological Properties of Convex Sets and Functions . . .	777
5.3.2	Relative interior of a set	778
5.3.3	Openness and compactness are preserved by convex hull operation	792
5.3.4	Extremal points of a simplex are some vertices	797
5.3.5	Closest point of a convex set is unique, with a continuous projection	801
5.3.6	More convexity generalities	809
5.3.7	Convex set as intersection of halfspaces	810
5.3.8	Convexity of general and special intervals	810
5.3.9	On <i>real</i> , <i>is_interval</i> , <i>convex</i> and <i>connected</i> are all equivalent	812
5.3.10	Another intermediate value theorem formulation	814
5.3.11	A bound within an interval	814
5.3.12	Representation of any interval as a finite convex hull . . .	816
5.3.13	Bounded convex function on open set is continuous . . .	818
5.3.14	Upper bound on a ball implies upper and lower bounds . . .	820
6	Unsorted	823
6.0.1	Shrinking towards the interior of a convex set	824
6.0.2	Some obvious but surprisingly hard simplex lemmas	829
6.0.3	Relative interior of convex set	837
6.0.4	The relative frontier of a set	846
6.0.5	Convexity on direct sums	876
6.0.6	Explicit formulas for interior and relative interior of convex hull	883
6.0.7	Similar results for closure and (relative or absolute) frontier	890
6.0.8	Coplanarity, and collinearity in terms of affine hull . . .	894
6.0.9	Basic lemmas about hyperplanes and halfspaces	904
6.0.10	Use set distance for an easy proof of separation properties . . .	905
6.0.11	Connectedness of the intersection of a chain	907
6.0.12	Proper maps, including projections out of compact sets . . .	910
6.0.13	Closure of conic hulls	911
6.0.14	Trivial fact: convexity equals connectedness for collinear sets	914
6.0.15	Some stepping theorems	924

6.0.16	General case without assuming closure and getting non-strict separation	927
6.0.17	Some results on decomposing convex hulls: intersections, simplicial subdivision	931
6.0.18	Lower-dimensional affine subsets are nowhere dense	943
6.0.19	Parallel slices, etc	945
6.0.20	Paracompactness	949
6.0.21	Closed-graph characterization of continuity	952
6.0.22	The union of two collinear segments is another segment	954
6.0.23	Covering an open set by a countable chain of compact sets	958
6.0.24	Orthogonal complement	960
6.0.25	A non-injective linear function maps into a hyperplane.	962
6.1	Path-Connectedness	964
6.1.1	Paths and Arcs	964
6.1.2	Invariance theorems	965
6.1.3	Basic lemmas about paths	967
6.1.4	Path Images	971
6.1.5	Simple paths with the endpoints removed	973
6.1.6	The operations on paths	974
6.1.7	Some reversed and "if and only if" versions of joining theorems	976
6.1.8	The joining of paths is associative	979
6.1.9	Subpath	981
6.1.10	There is a subpath to the frontier	984
6.1.11	Shift Path to Start at Some Given Point	986
6.1.12	Straight-Line Paths	989
6.1.13	Segments via convex hulls	992
6.1.14	Bounding a point away from a path	994
6.1.15	Path component	995
6.1.16	Path connectedness of a space	996
6.1.17	Lemmas about path-connectedness	1002
6.1.18	Path components	1004
6.1.19	Path components	1005
6.1.20	Paths and path-connectedness	1015
6.1.21	Path components	1016
6.1.22	Sphere is path-connected	1018
6.1.23	Every annulus is a connected set	1025
6.1.24	Relations between components and path components	1026
6.1.25	Existence of unbounded components	1028
6.1.26	The <i>inside</i> and <i>outside</i> of a Set	1030
6.1.27	Condition for an open map's image to contain a ball	1047
6.1.28	Rectangular paths	1052
6.2	Neighbourhood bases and Locally path-connected spaces	1054

6.2.1	Neighbourhood Bases	1054
6.2.2	Locally path-connected spaces	1056
6.2.3	Locally connected spaces	1066
6.2.4	Dimension of a topological space	1075
6.3	Some Uncountable Sets	1080
6.4	Homotopy of Maps	1082
6.4.1	Trivial properties	1083
6.4.2	Homotopy with P is an equivalence relation	1085
6.4.3	Continuity lemmas	1087
6.4.4	Homotopy of paths, maintaining the same endpoints	1093
6.4.5	Group properties for homotopy of paths	1096
6.4.6	Homotopy of loops without requiring preservation of endpoints	1098
6.4.7	Relations between the two variants of homotopy	1099
6.4.8	Homotopy of "nearby" function, paths and loops	1104
6.4.9	Homotopy and subpaths	1105
6.4.10	Simply connected sets	1108
6.4.11	Contractible sets	1111
6.4.12	Starlike sets	1114
6.4.13	Local versions of topological properties in general	1117
6.4.14	An induction principle for connected sets	1121
6.4.15	Basic properties of local compactness	1123
6.4.16	Sura-Bura's results about compact components of sets	1131
6.4.17	Special cases of local connectedness and path connectedness	1135
6.4.18	Relations between components and path components	1142
6.4.19	Components, continuity, openin, closedin	1146
6.4.20	Existence of isometry between subspaces of same dimension	1148
6.4.21	Retracts, in a general sense, preserve (co)homotopic triviality)	1153
6.4.22	Homotopy equivalence	1156
6.4.23	Homotopy equivalence of topological spaces.	1156
6.4.24	Contractible spaces	1159
6.4.25	Misc other results	1171
6.4.26	Some simple positive connection theorems	1172
6.4.27	Self-homeomorphisms shuffling points about	1178
6.4.28	Nullhomotopic mappings	1197
6.5	Euclidean space and n-spheres, as subtopologies of n-dimensional space	1201
6.5.1	Euclidean spaces as abstract topologies	1201
6.5.2	n-dimensional spheres	1205
6.6	Various Forms of Topological Spaces	1211
6.6.1	Connected topological spaces	1211

6.6.2	The notion of "separated between" (complement of "connected between")	1212
6.6.3	Connected components	1217
6.6.4	Monotone maps (in the general topological sense)	1221
6.6.5	Other countability properties	1225
6.6.6	Neighbourhood bases EXTRAS	1231

6.7.7	Limits at a point in a topological space	1351
6.7.8	Normal spaces and metric spaces	1351
6.7.9	Topological limit in metric spaces	1352
6.7.10	Cauchy sequences and complete metric spaces	1355
6.7.11	Totally bounded subsets of metric spaces	1370
6.7.12	Compactness in metric spaces	1376
6.7.13	Continuous functions on metric spaces	1387
6.7.14	Completely metrizable spaces	1391
6.7.15	Product metric	1395
6.7.16	More sequential characterizations in a metric space	1405
6.7.17	Three strong notions of continuity for metric spaces	1413
6.7.18	Isometries	1431
6.7.19	"Capped" equivalent bounded metrics and general product metrics	1432
6.8	Infinite sums	1444

6.8.1	Definition and syntax	1444
6.8.2	General properties	1445
6.8.3	Absolute convergence	1484
6.8.4	Extended reals and nats	1488
6.8.5	Real numbers	1491
6.8.6	Complex numbers	1491
6.9	Ordered Euclidean Space	1519
6.10	Arcwise-Connected Sets	1526
6.10.1	The Brouwer reduction theorem	1527
6.10.2	Arcwise Connections	1529
6.10.3	Density of points with dyadic rational coordinates	1529
6.10.4	Accessibility of frontier points	1577
6.11	The Urysohn lemma, its consequences and other advanced material about metric spaces	1581
6.11.1	Urysohn lemma and Tietze's theorem	1581
6.11.2	Random metric space stuff	1596
6.11.3	Hereditarily normal spaces	1597
6.11.4	Completely regular spaces	1600
6.11.5	More generally, the k-ification functor	1610
6.11.6	One-point compactifications and the Alexandroff extension construction	1614
6.11.7	Extending continuous maps "pointwise" in a regular space	1632
6.11.8	Extending Cauchy continuous functions to the closure	1635
6.11.9	Metric space of bounded functions	1647
6.11.10	Metric space of continuous bounded functions	1653
6.11.11	Existence of completion for any metric space M as a subspace of $M \Rightarrow \mathbb{R}$	1657
6.11.12	Contractions	1660
6.11.13	The Baire Category Theorem	1663
6.11.14	Sierpinski-Hausdorff type results about countable closed unions	1669
6.11.15	The Tychonoff embedding	1672
6.11.16	Urysohn and Tietze analogs for completely regular spaces	1674
6.11.17	Size bounds on connected or path-connected spaces	1679
6.11.18	Lavrentiev extension etc	1684
6.11.19	Embedding in products and hence more about completely metrizable spaces	1692
6.11.20	Theorems from Kuratowski	1699
6.11.21	A perfect set in common cases must have at least the cardinality of the continuum	1708
6.11.22	Isolate and discrete	1717
6.11.23	A set of points sparse in another set	1724
6.11.24	Co-sparseness filter	1726
6.12	Operator Norm	1729

6.13	Limits on the Extended Real Number Line	1734
6.13.1	Extended-Real.thy	1740
6.13.2	Extended-Nonnegative-Real.thy	1754
6.13.3	monoset	1754
6.13.4	Relate extended reals and the indicator function	1772
6.14	Radius of Convergence and Summation Tests	1773
6.14.1	Convergence tests for infinite sums	1773
6.14.2	Radius of convergence	1783
6.15	Uniform Limit and Uniform Convergence	1793
6.15.1	Definition	1793
6.15.2	Exchange limits	1794
6.15.3	Uniform limit theorem	1795
6.15.4	Comparison Test	1801
6.15.5	Weierstrass M-Test	1803
6.15.6	Structural introduction rules	1806
6.15.7	Power series and uniform convergence	1813
6.16	Bounded Linear Function	1814
6.16.1	Intro rules for <i>bounded_linear</i>	1814
6.16.2	declaration of derivative/continuous/tendsto introduc- tion rules for bounded linear functions	1815
6.16.3	Type of bounded linear functions	1816
6.16.4	Type class instantiations	1816
6.16.5	On Euclidean Space	1821
6.16.6	concrete bounded linear functions	1826
6.16.7	The strong operator topology on continuous linear op- erators	1830
6.17	Derivative	1832
6.17.1	Derivatives	1832
6.17.2	Derivative with composed bilinear function	1832
6.17.3	Differentiability	1834
6.17.4	Frechet derivative and Jacobian matrix	1836
6.17.5	Differentiability implies continuity	1837
6.17.6	The chain rule	1838
6.17.7	Composition rules stated just for differentiability	1839
6.17.8	Uniqueness of derivative	1839
6.17.9	Derivatives of local minima and maxima are zero	1842
6.17.10	One-dimensional mean value theorem	1844
6.17.11	More general bound theorems	1845
6.17.12	Differentiability of inverse function (most basic form)	1854
6.17.13	Uniformly convergent sequence of derivatives	1859
6.17.14	Differentiation of a series	1866
6.17.15	Derivative as a vector	1868
6.17.16	Field differentiability	1875
6.17.17	Field derivative	1880

6.17.18	Relation between convexity and derivative	1884
6.17.19	Partial derivatives	1885
6.17.20	Differentiable case distinction	1889
6.17.21	The Inverse Function Theorem	1891
6.17.22	Piecewise differentiable functions	1898
6.17.23	The concept of continuously differentiable	1901
6.18	Finite Cartesian Products of Euclidean Spaces	1909
6.18.1	Closures and interiors of halfspaces	1910
6.18.2	Bounds on components etc. relative to operator norm .	1911
6.18.3	Convex Euclidean Space	1918
6.18.4	Arbitrarily good rational approximations	1918
6.18.5	Derivative	1919
6.18.6	Routine results connecting the types (<i>real</i> , <i>1</i>) <i>vec</i> and <i>real</i>	1919
6.19	Complex Analysis Basics	1921
6.19.1	General lemmas	1921
6.19.2	Holomorphic functions	1924
6.19.3	Analyticity on a set	1929
6.19.4	Analyticity at a point	1934
6.19.5	Combining theorems for derivative with “analytic at” hypotheses	1935
6.19.6	Complex differentiation of sequences and series	1935
6.19.7	Taylor on Complex Numbers	1937
6.20	Complex Transcendental Functions	1941
6.20.1	Möbius transformations	1941
6.20.2	The Exponential Function	1942
6.20.3	Euler and de Moivre formulas	1943
6.20.4	Relationships between real and complex trigonometric and hyperbolic functions	1945
6.20.5	More on the Polar Representation of Complex Numbers	1946
6.20.6	Taylor series for complex exponential, sine and cosine .	1955
6.20.7	The argument of a complex number (HOL Light version)	1959
6.20.8	Analytic properties of tangent function	1964
6.20.9	The principal branch of the Complex logarithm	1965
6.20.10	Relation to Real Logarithm	1966
6.20.11	Derivative of Ln away from the branch cut	1967
6.20.12	Quadrant-type results for Ln	1973
6.20.13	More Properties of Ln	1974
6.20.14	Uniform convergence and products	1978
6.20.15	The Argument of a Complex Number	1983
6.20.16	The Unwinding Number and the Ln product Formula .	1987
6.20.17	Characterisation of $Im(Ln z)$ (Wenda Li)	1989
6.20.18	Relation between Ln and Arg2pi, and hence continuity of Arg2pi	1990

6.20.19	Complex Powers	1992
6.20.20	Some Limits involving Logarithms	1999
6.20.21	Relation between Square Root and \exp/\ln , hence its derivative	2003
6.20.22	Complex arctangent	2006
6.20.23	Real arctangent	2011
6.20.24	Bounds on pi using real arctangent	2014
6.20.25	Inverse Sine	2015
6.20.26	Inverse Cosine	2018
6.20.27	Upper and Lower Bounds for Inverse Sine and Cosine	2022
6.20.28	Interrelations between Arcsin and Arccos	2023
6.20.29	Relationship with Arcsin on the Real Numbers	2023
6.20.30	Relationship with Arccos on the Real Numbers	2024
6.20.31	Continuity results for arcsin and arccos	2024
6.20.32	Roots of unity	2025

1.13.22 The topology generated by some (open) subsets

In the definition below of a generated topology, the *Empty* case is not necessary, as it follows from *UN* taking for K the empty set. However, it is convenient to have, and is never a problem in proofs, so I prefer to write it down explicitly.

We do not require *UNIV* to be an open set, as this will not be the case in applications. (We are thinking of a topology on a subset of *UNIV*, the remaining part of *UNIV* being irrelevant.)

inductive *generate_topology_on* **for** S **where**

Empty: *generate_topology_on* S $\{\}$

| *Int*: *generate_topology_on* S $a \implies$ *generate_topology_on* S $b \implies$ *generate_topology_on* S $(a \cap b)$

1.13.25 Pullback topology

Pulling back a topology by map gives again a topology. *subtopology* is a special case of this notion, pulling back by the identity. We introduce the general notion as we will need it to define the strong operator topology on the space of continuous linear operators, by pulling back the product topology on the space of all functions.

pullback_topology $A f T$ is the pullback of the topology T by the map f on the set A .

definition *pullback_topology*::('a set) \Rightarrow ('a \Rightarrow 'b) \Rightarrow ('b topology) \Rightarrow ('a topology)

where *pullback_topology* $A f T = \text{topology } (\lambda S. \exists U. \text{openin } T U \wedge S = f^{-1}U \cap A)$

2.2.1 Abstract

The following document presents a proof that the Continuum is uncountable. It is formalised in the Isabelle/Isar theorem proving system.

Theorem: The Continuum \mathbb{R} is not denumerable. In other words, there does not exist a function $f: \mathbb{N} \Rightarrow \mathbb{R}$ such that f is surjective.

Outline: An elegant informal proof of this result uses Cantor's Diagonalisation argument. The proof presented here is not this one.

First we formalise some properties of closed intervals, then we prove the Nested Interval Property. This property relies on the completeness of the Real numbers and is the foundation for our argument. Informally it states that an intersection of countable closed intervals (where each successive interval is a subset of the last) is non-empty. We then assume a surjective function $f: \mathbb{N} \Rightarrow \mathbb{R}$ exists and find a real x such that x is not in the range of f by generating a sequence of closed intervals then using the Nested Interval Property.

```

theorem real_non_denum:  $\nexists f :: \text{nat} \Rightarrow \text{real. surj } f$ 
proof

```

```

  assume  $\exists f :: \text{nat} \Rightarrow \text{real. surj } f$ 
  then obtain  $f :: \text{nat} \Rightarrow \text{real}$  where  $\text{surj } f ..$ 

```

First we construct a sequence of nested intervals, ignoring *range* f .

```

  have  $a < b \implies \exists ka kb. ka < kb \wedge \{ka..kb\} \subseteq \{a..b\} \wedge c \notin \{ka..kb\}$  for  $a b c :: \text{real}$ 

```

```

  by (auto simp add: not_le cong: conj_cong)
    (metis dense le_less_linear less_linear less_trans order_refl)
then obtain  $i\ j$  where  $ij$ :
   $a < b \implies i\ a\ b\ c < j\ a\ b\ c$ 
   $a < b \implies \{i\ a\ b\ c .. j\ a\ b\ c\} \subseteq \{a .. b\}$ 
   $a < b \implies c \notin \{i\ a\ b\ c .. j\ a\ b\ c\}$ 
for  $a\ b\ c :: real$ 
by metis

define  $ivl$  where  $ivl =$ 
   $rec\_nat\ (f\ 0 + 1, f\ 0 + 2)\ (\lambda n\ x.\ (i\ (fst\ x)\ (snd\ x)\ (f\ n), j\ (fst\ x)\ (snd\ x)\ (f\ n)))$ 
define  $I$  where  $I\ n = \{fst\ (ivl\ n) .. snd\ (ivl\ n)\}$  for  $n$ 

have  $ivl$  [simp]:
   $ivl\ 0 = (f\ 0 + 1, f\ 0 + 2)$ 
   $\bigwedge n.\ ivl\ (Suc\ n) = (i\ (fst\ (ivl\ n))\ (snd\ (ivl\ n))\ (f\ n), j\ (fst\ (ivl\ n))\ (snd\ (ivl\ n))\ (f\ n))$ 
unfolding  $ivl\_def$  by  $simp\_all$ 

This is a decreasing sequence of non-empty intervals.

have  $less: fst\ (ivl\ n) < snd\ (ivl\ n)$  for  $n$ 
by ( $induct\ n$ ) ( $auto\ intro!: ij$ )

have  $decseq\ I$ 
unfolding  $I\_def\ decseq\_Suc\_iff\ ivl\_fst\_conv\ snd\_conv$ 
by ( $intro\ ij\ allI\ less$ )

Now we apply the finite intersection property of compact sets.

have  $I\ 0 \cap (\bigcap i.\ I\ i) \neq \{\}$ 
proof ( $rule\ compact\_imp\_fip\_image$ )
  fix  $S :: nat\ set$ 
  assume  $fin: finite\ S$ 
  have  $\{\} \subset I\ (Max\ (insert\ 0\ S))$ 
  unfolding  $I\_def$  using  $less$  [of  $Max\ (insert\ 0\ S)$ ] by  $auto$ 
  also have  $I\ (Max\ (insert\ 0\ S)) \subseteq (\bigcap i \in insert\ 0\ S.\ I\ i)$ 
  using  $fin\ decseqD$  [OF  $\langle decseq\ I \rangle$ , of  $Max\ (insert\ 0\ S)$ ]
  by ( $auto\ simp: Max\_ge\_iff$ )
  also have  $(\bigcap i \in insert\ 0\ S.\ I\ i) = I\ 0 \cap (\bigcap i \in S.\ I\ i)$ 
  by  $auto$ 
  finally show  $I\ 0 \cap (\bigcap i \in S.\ I\ i) \neq \{\}$ 
  by  $auto$ 
qed ( $auto\ simp: I\_def$ )
then obtain  $x$  where  $x \in I\ n$  for  $n$ 
by  $blast$ 
moreover from  $\langle surj\ f \rangle$  obtain  $j$  where  $x = f\ j$ 
by  $blast$ 
ultimately have  $f\ j \in I\ (Suc\ j)$ 
by  $blast$

2.5 Function Topology

We want to define the general product topology.

The product topology on a product of topological spaces is generated by the sets which are products of open sets along finitely many coordinates, and the whole space along the other coordinates. This is the coarsest topology for which the projection to each factor is continuous.

To form a product of objects in Isabelle/HOL, all these objects should be subsets of a common type 'a. The product is then $\prod_{i \in I} X_i$, the set of elements from 'a such that the i -th coordinate belongs to X_i for all $i \in I$.

Hence, to form a product of topological spaces, all these spaces should be subsets of a common type. This means that type classes can not be used to define such a product if one wants to take the product of different topological spaces (as the type 'a can only be given one structure of topological space using type classes). On the other hand, one can define different topologies (as introduced in *thy*) on one type, and these topologies do not need to share the same maximal open set. Hence, one can form a product of topologies in this sense, and this works well. The big caveat is that it does not interact well with the main body of topology in Isabelle/HOL defined in terms of type classes... For instance, continuity of maps is not defined in this setting.

As the product of different topological spaces is very important in several areas of mathematics (for instance adeles), I introduce below the product topology in terms of topologies, and reformulate afterwards the consequences in terms of type classes (which are of course very handy for applications).

Given this limitation, it looks to me that it would be very beneficial to revamp the theory of topological spaces in Isabelle/HOL in terms of topologies, and keep the statements involving type classes as consequences of more general statements in terms of topologies (but I am probably too naive here).

Here is an example of a reformulation using topologies. Let

$$\begin{aligned} \text{continuous_map } T1 \ T2 \ f = \\ ((\forall U. \text{openin } T2 \ U \longrightarrow \text{openin } T1 \ (f^{-1}U \cap \text{topspace}(T1))) \\ \wedge (f^{-1}(\text{topspace } T1) \subseteq (\text{topspace } T2))) \end{aligned}$$

be the natural continuity definition of a map from the topology $T1$ to the topology $T2$. Then the current *continuous_on* (with type classes) can be redefined as

$$\begin{aligned} \text{continuous_on } s \ f = \\ \text{continuous_map } (\text{top_of_set } s) \ (\text{topology euclidean}) \ f \end{aligned}$$

In fact, I need *continuous_map* to express the continuity of the projection on subfactors for the product topology, in Lemma *continuous_on_restrict_product_topology*, and I show the above equivalence in Lemma *continuous_map_iff_continuous*.

I only develop the basics of the product topology in this theory. The most important missing piece is Tychonov theorem, stating that a product of compact spaces is always compact for the product topology, even when the product is not finite (or even countable).

I realized afterwards that this theory has a lot in common with `~/src/HOL/Library/Finite_Map.thy`.

2.5.1 The product topology

We can now define the product topology, as generated by the sets which are products of open sets along finitely many coordinates, and the whole space along the other coordinates. Equivalently, it is generated by sets which are one open set along one single coordinate, and the whole space along other coordinates. In fact, this is only equivalent for nonempty products, but for the empty product the first formulation is better (the second one gives an empty product space, while an empty product should have exactly one point, equal to *undefined* along all coordinates).

So, we use the first formulation, which moreover seems to give rise to more straightforward proofs.

definition *product_topology*: $('i \Rightarrow ('a \text{ topology})) \Rightarrow ('i \text{ set}) \Rightarrow (('i \Rightarrow 'a) \text{ topology})$
where *product_topology* $T \ I =$
topology_generated_by $\{(\Pi_E \ i \in I. X \ i) \mid X. (\forall i. \text{openin } (T \ i) \ (X \ i)) \wedge \text{finite } \{i. X \ i \neq \text{topspace } (T \ i)\}\}$

abbreviation *powertop_real* $:: 'a \text{ set} \Rightarrow ('a \Rightarrow \text{real}) \text{ topology}$
where *powertop_real* $\equiv \text{product_topology } (\lambda i. \text{euclideanreal})$

The total set of the product topology is the product of the total sets along each coordinate.
